INTERVIEW BRIEF · 12 AUGUST 2026

USDT owns ~90% of LATAM. Circle's opening isn't distribution — it's the regulation that just landed.

Everything that might come up in the room: the business model, the numbers, the competitive reality, the new rulebooks in Brazil and Argentina, and what a regional marketing function should actually do about it.

$73.3B USDC in circulation, Q2 2026 (+19% YoY)	**~90%** USDT share of stablecoin volume in Brazil and Chile	**$324B** LATAM stablecoin transaction volume, 2025 (+89%)	**2 Feb 26** Brazil's new crypto framework in force

PREPARED FOR MARC LEBRETON · REGIONAL MARKETING DIRECTOR, LATAM · SÃO PAULO

INDEPENDENT ANALYSIS FROM PUBLIC SOURCES · NOT A CIRCLE DOCUMENT · FIGURES CURRENT TO Q2 2026, REPORTED 5 AUGUST 2026

THE THESIS

You will not out-distribute Tether in LATAM. You can out-qualify it.

USDT is the default dollar across the region — near 100% of volume in Bolivia, Peru and Ecuador, roughly 90% in Brazil and Chile. That is a retail network effect built over a decade, and no marketing budget reverses it. **But the buyer that matters to Circle isn't retail.**

BEAT 1

Circle sells to institutions, not to savers

Revenue comes from reserves on balances held through banks, fintechs, PSPs and exchanges. The marketing target is a compliance officer, a treasurer and a CTO — not a person hedging their salary.

BEAT 2

Regulation just became a gate

Brazil's BCB framework took force 2 February 2026 and reclassifies stablecoin activity as FX. Argentina's banks are being let in. Regulated counterparties now need a regulated issuer.

BEAT 3

Circle's product is trust, and it's provable

NYSE-listed, audited reserves, GENIUS-aligned, and now with BlackRock, Visa, Mastercard and DTCC validating its chain. Tether cannot make that claim.

BEAT 4

So marketing's job is category, not conquest

Not "switch from USDT". Rather: make regulated stablecoin infrastructure the obvious build for LATAM enterprises — and be the default when they choose.

THE OPENING LINE

“Tether won the savings account. That fight is over. The one that isn't is the treasury, the payout rail and the bank ledger — and that's a fight decided by regulation, audits and integrations, which is where Circle is strong and Tether structurally isn't.”

What the JD actually tells you — three things that change the approach.

1 · THE REPORTING LINE

You support a LATAM Managing Director

The wording is precise: *"directly support the priorities and initiatives of the Managing Director for the region"* and *"serve as a strategic marketing partner to regional leadership."*

This is a business-partner role, not an autonomous strategy seat. There is a commercial leader above you with a plan. Your job is to translate it into programs that ship, with judgement applied — not to arrive and redefine LATAM strategy.

Adjust the register accordingly: bring the market thesis as *evidence you'll be a good partner*, not as a manifesto.

2 · THE MEASUREMENT

Pipeline, acquisition and market expansion — named explicitly

The JD asks for programs that "support pipeline growth, customer acquisition, and market expansion," and for partnering "closely with Business Development, Sales, and Revenue teams."

So it is B2B demand generation against a sales motion, confirming the institutional read. Lead with pipeline language. The balances argument on slide 20 is still the more sophisticated point — but introduce it as a refinement, not a correction.

3 · REGULATION IS IN THE JOB DESCRIPTION

Twice, explicitly

- Event strategy includes **"regulatory engagements"** alongside conferences and forums.
- You must **"ensure all regional marketing programs comply with local regulatory, legal, and brand requirements, in partnership with legal and compliance teams."**
- And: continuously assess **"regulatory developments and macroeconomic trends"** to inform leadership decisions.

This validates the whole Part 04 thesis — and it means marketing compliance is a real workstream here, not a checkbox. In a regulated product you cannot casually say "yield", "guaranteed" or "deposit".

CONFIRMED BY THE POSTING

MARKETS	Brazil, Mexico, Argentina, Colombia "and more" — exactly the prioritisation in Part 02
BUDGET	You own regional budgets and forecasts, in partnership with finance
SCOPE	Regional marketing calendar, partner and ecosystem co-marketing, events, GTM localisation

CROSS-FUNCTIONAL	Global product marketing, comms, content, creative, events, marketing ops, legal
LANGUAGES	English and Portuguese required; Spanish strongly preferred

THE BAR, AND THE COMPETITION

- **12+ years of marketing experience** with demonstrated ownership of regional or multi-country LATAM initiatives. This is the hard gate.
- **746 people have clicked apply.** 34% director-level, 35% senior, and **51% hold an MBA**.
- Crypto, blockchain and stablecoin familiarity is **preferred, not required** — which is the door. Most of that MBA-heavy field will be traditional marketers who have never touched a digital asset.
- Context worth knowing: Circle is 1,547 people, up 47% in two years, with **marketing up 67%**. This is a function being built out, not a backfill.

CONTENTS

Eight parts.

HOW TO READ IT

Arrows or **Space** to move · **I** for the index · **P** to print. Colour carries meaning: **green** is the argument, **blue** is the differentiated move, **ochre** is a risk or something to verify before you say it out loud.

Circle is a reserve-income business wearing a payments-company jacket.

This is the single most important thing to understand before the interview, because it determines what marketing is actually for. **Circle earns interest on the dollars backing USDC.** Not a take rate on payments, not software subscriptions — interest on float.

THE CHAIN THAT CONNECTS MARKETING TO REVENUE

Balances are the product

more USDC issued → larger reserve pool → more interest income → revenue

So every marketing metric that matters ladders to **USDC in circulation held through partners in the region**, and to the durability of those balances. A campaign that drives a spike in transactions but no resting balance does very little for Circle's P&L.

Corollary worth saying out loud: Circle's LATAM revenue is a function of how much USDC Brazilian and Argentine institutions *hold*, not how much they move. That reframes the whole funnel.

THE STRUCTURAL VULNERABILITY — KNOW IT, DON'T LEAD WITH IT

The model is highly sensitive to interest rates. If rates fall, revenue falls on the same balances. That is the strategic reason Circle is building **Arc** and **CPN** — to add revenue that isn't reserve interest. Understanding that makes you sound like someone who read the S-1, not the press releases.

DISTRIBUTION IS THE BIGGEST COST LINE

Circle keeps roughly $0.37 of every reserve dollar

- Circle shares roughly **50% of USDC interest income with Coinbase** under the 2023 agreement. Coinbase took ~56% of USDC reserve revenue in 2024.
- Distribution and transaction costs were **$1.011B in 2024**, up from $719.8M in 2023.
- **That agreement is up for renewal in August 2026 — this month.** Small changes to Circle's take rate compound against rate and supply scenarios.

WHY THIS MATTERS FOR A LATAM MARKETING ROLE

Distribution economics are why **direct regional partnerships matter so much**. Balances Circle originates itself through Nubank, BTG or a Brazilian PSP carry very different economics from balances that arrive via Coinbase. A regional function that originates its own distribution is defending margin, not just building brand — and that is the language to use when justifying budget.

Sources: Circle Q2 2026 results (5 Aug 2026) · Sacra equity research · FY2024/FY2025 disclosures on distribution cost.

The numbers you should be able to quote cold.

$701M Total revenue and reserve income, Q2 2026 +7% YOY	**$73.3B** USDC in circulation at quarter end +19% YOY	**$76.5B** Average circulation — an all-time high	**$14.8T** USDC onchain transaction volume in the quarter +151% YOY	**$143M** Adjusted EBITDA, 50% margin +8% YOY
41.2% Revenue less distribution cost margin +3PP YOY				

READ THE DIVERGENCE — IT'S THE MOST INTERESTING THING IN THE RELEASE

Volume up 151%. Revenue up 7%.

Transaction volume is growing more than twenty times faster than revenue, because **Circle monetises balances, not transactions**. Every dollar of that $14.8 trillion moved across rails Circle largely does not charge for.

That gap is the entire strategic rationale for Arc and CPN — building surfaces where activity itself earns. If you want one observation that demonstrates you understand the business, this is it.

AND THE NEWER LINE

Other revenue guidance doubled to $310–330M

- Driven by **$242M of Arc token presale revenue**, roughly 75% expected to be recognised in 2026.
- Circle swung to a Q2 profit and lifted full-year 2026 guidance.
- This is the first material evidence that non-reserve revenue can be built — which is exactly the story the equity market is watching.

SAY THIS

"Onchain volume grew a hundred and fifty-one percent last quarter while revenue grew seven, because the business monetises balances rather than throughput. Everything Circle is building right now — Arc, CPN — is an attempt to close that gap. A regional function should be judged on which side of it it's feeding."

Arc — the bet that Circle becomes infrastructure rather than an issuer.

Circle's own Layer-1, with **public mainnet on 16 September 2026** — roughly a month after you interview. Expect it to come up, and expect enthusiasm.

THE FOUNDING VALIDATOR COHORT — ANNOUNCED 5 AUGUST 2026

Eleven institutions, and the list *is* the message

BlackRock · DTCC · Galaxy · Global Payments · Intercontinental Exchange · Mastercard · MoneyGram · SBI Group · Standard Chartered · Sumitomo Corporation · Visa

- **BlackRock** is expected to deploy BUIDL — its institutional digital liquidity fund — on Arc, using native USDC.
- **DTCC** will work with Circle on tokenising DTC-custodied assets, beginning in H2 2027.
- Over **100 ecosystem and institutional builders** are already in private mainnet.

WHY IT MATTERS TO THE LATAM PITCH

It is the trust argument, made concrete

To a Brazilian bank's risk committee, "BlackRock, Visa, Mastercard and the DTCC run validators on this network" does more work than any brand campaign. **It converts an abstract claim about legitimacy into a list of names the committee already banks with.**

Marketing implication: in LATAM, lead with the institutional roster, not with throughput or fees. The buyer's real question is "will this survive an audit and a regulator", and that list answers it.

HANDLE WITH CARE

MoneyGram and Global Payments are validators — both compete directly with the remittance and payment players you'd want as LATAM partners. If asked about channel conflict, that's a real and thoughtful question, and "I'd want to understand how we position CPN to MTOs who see MoneyGram on the validator list" is a strong thing to say.

Circle Payments Network — the product a LATAM marketer actually sells.

CPN is live on mainnet. It coordinates regulated financial institutions to move value using USDC as the settlement asset, with fiat in and fiat out at each end. **This is where LATAM is most obviously relevant, because LATAM is a payout market.**

THE LATAM CONNECTIVE TISSUE ALREADY BUILT

Local currency payouts through partner institutions

- **Alfred Pay** — infrastructure across LATAM, strong in Brazil and Mexico. As a beneficiary institution on CPN it enables stablecoin-to-fiat off-ramps **via PIX and SPEI**, giving real-time payouts in the highest-demand corridors.
- Local currency payout support now covers **Brazil and Colombia** among others, via partners including Alfred, TazaPay and Yellow Card.
- **Movantis** joined CPN — over **$60B moved annually**, 80,000+ payout locations, 70+ money transfer operators, 130+ countries, operating in both directions.

WHAT IT'S FOR

Disbursements, supplier payments, remittances, payroll

Not consumer trading. The buyer is a business with a cross-border payment problem: paying suppliers, paying contractors, settling with marketplaces, moving treasury.

The marketing consequence: this is B2B demand generation with long, considered sales cycles — content, case studies, developer docs, field events and partner co-marketing. It is not a brand-awareness or consumer-acquisition motion, and if you pitch it as one you'll misread the role.

THE CONNECTION TO MAKE IN THE ROOM

PIX and SPEI are the two best real-time payment rails in the Americas, and both now have USDC on-ramps and off-ramps. That means **a dollar can move from a US business to a Brazilian supplier's bank account in minutes, at well under 1%** — against correspondent banking that takes days. That is the single clearest value proposition Circle has in the region, and it needs no crypto vocabulary to explain.

The full product surface — what you would actually be marketing.

PRODUCT	WHAT IT IS	WHO BUYS IT	LATAM RELEVANCE
USDC	The dollar stablecoin. Circulation $73.3B	Everyone — via partners	**The core. Every other product exists to grow or defend balances**
EURC	Euro stablecoin	European corridors, FX	Secondary, but relevant for Brazil–Europe trade flows
Circle Mint	Institutional issuance and redemption — mint and burn USDC at par	Exchanges, banks, PSPs, large treasuries	**Now live in Brazil and Mexico with local-currency bank transfer via PIX and SPEI** — minutes rather than days, no international wire
CPN	Cross-border payments network settling in USDC	Banks, PSPs, MTOs, marketplaces	High. LATAM is a payout-heavy region
Arc	Circle's L1, public mainnet 16 Sept 2026	Institutional builders, tokenisation	Emerging. The credibility story more than a near-term revenue line here
Developer platform	Wallets, Paymaster/gas abstraction, Contracts, APIs	Fintech engineers, startups	High — LATAM has a deep fintech developer base
Compliance surface	Attestations, audited reserves, Transparency reporting	Risk and compliance officers	**Arguably the highest-leverage marketing asset in the region right now**

A QUESTION THAT SHOWS YOU UNDERSTAND THE PORTFOLIO

“Is the LATAM mandate primarily about growing USDC balances through local partners, or about driving CPN adoption as a payments product? Because those are two different marketing functions — one is partner and category marketing, the other is B2B demand generation — and I'd want to know which one I'm being measured on.”

LATAM isn't an emerging stablecoin market. It's the most advanced one.

$324B LATAM stablecoin transaction volume in 2025 +89% YOY	**24%** of Argentines hold crypto — 11.2M people, the highest adoption rate in the world	**$47B** Argentine stablecoin transaction volume, 2025	**$14.68B** Brazilian crypto purchases, H1 2026 — up 135%	**$174B** Remittances to LATAM in 2025
+100% Growth in LATAM enterprise stablecoin adoption in a year				

THE USE-CASE SPLIT — AND IT'S THE KEY TO SEGMENTATION

Argentina's $47B breaks down as 68% savings, 22% payments, 10% remittances

That distribution explains everything about why USDT leads. **Two-thirds of LATAM stablecoin demand is people storing value against currency risk** — a consumer behaviour where the incumbent's ubiquity and P2P liquidity are almost impossible to dislodge.

But the other third — payments and remittances — is institutional, corridor-based, and increasingly regulated. That segment is contestable, it's where CPN and Mint compete, and it's where a marketing budget can actually move share.

WHY THE REGION ADOPTED FASTER THAN ANYWHERE

- **Currency instability** — Argentine savers convert pesos to dollars on payday as a reflex; stablecoins made that instant and self-custodied.
- **Capital controls and FX friction** — official dollar access has been rationed or expensive for years.
- **Excellent instant payment rails** — PIX and SPEI make the fiat leg trivial, which is exactly what most markets lack.
- **Deep fintech sector** — Nubank, Mercado Pago, Bitso, Ualá already own the customer relationship and the compliance stack.

THE FRAMING THAT LANDS

In most of the world stablecoins are a crypto product looking for a use case. In LATAM they are **a dollar-access product that happens to run on crypto rails** — and most people using them do not consider themselves crypto users at all. Market to the problem, not the technology.

Six markets, six different jobs.

MARKET	DEMAND DRIVER	REGULATORY STATE	CIRCLE'S POSITION	THE MARKETING JOB
Brazil	Payments, corporate treasury, trade. Crypto purchases **+135% to $14.68B** in H1 2026	**The most comprehensive framework in LATAM, in force 2 Feb 2026**	Strongest — Nubank, BTG Pactual, Matera; Mint live via PIX	Category leadership. Own the compliant-issuer position while everyone re-papers for the new rules
Argentina	Savings and dollarisation. 24% of the population holds crypto; $47B volume	Liberalising fast — CNV recognition, BCRA letting banks in	New: Grupo BIND via its BEN platform; building a local team	Institutional beachhead. Banks are being allowed in for the first time since 2022 — be their default issuer
Mexico	Remittances above all — **$61.8B received in 2025**, though down 4.5%	Moderate; fintech law mature, crypto conservative	Mint live via SPEI; expansion stated	Corridor marketing. The US–Mexico remittance corridor is the single largest stablecoin payments prize in the hemisphere
Colombia	Payments and freelance/gig dollar income	Developing; VASP rules maturing	Named expansion target; CPN local-currency payout live	Early. Build the partner bench before the market is contested
Chile	Savings and cross-border commerce. **~90% USDT share**	Fintech law in force, relatively clear	Thin	Opportunistic. Small market, sophisticated buyers, good for proof points
Peru / Bolivia / Ecuador	Cash substitution — USDT at **near 100%** of volume, used for groceries and restaurants	Sparse. Bolivia only recently lifted its ban	Effectively absent	Not a year-one priority, and saying so is a strength

DON'T OVER-CLAIM THE REGION

A LATAM marketing plan that promises equal effort in six markets is a plan nobody believes. The defensible version is **Brazil and Mexico as the revenue markets, Argentina as the highest-velocity opportunity, Colombia as the build-ahead bet**, and the Andean cash-substitution markets explicitly deprioritised. Naming what you won't do is how you demonstrate you've actually prioritised.

The remittance corridor — where stablecoins already beat the incumbents on price.

THE PROOF POINTS ALREADY IN MARKET

- **Bitso** processed over **$6.5B of remittances in 2024** — more than 10% of the entire US–Mexico corridor, up from roughly 5% in 2022. By December 2025 it reached **$82B annualised total payment volume**.
- **Felix Pago** has moved over **$1B** through a USDC-to-SPEI model that settles **over WhatsApp**, at fees well below Western Union.
- Bitso's crypto-rail transfers cost **under 1%** all-in, including on-ramp and off-ramp.
- Mexico's share of Bitso Business volumes rose from 45% to 47% — enterprise, not retail.

THE LINE THAT MAKES THIS CONCRETE FOR A NON-CRYPTO AUDIENCE

“A Mexican family receiving money from the US can already do it through a stablecoin rail over WhatsApp for under one percent, settled in seconds to a SPEI account. That's not a pilot — it's over a billion dollars processed. The question for Circle isn't whether the rail works. It's whether the dollar on that rail is ours.”

THE COMPETITIVE COMPLICATION

The corridor is being fought over by everyone at once

- **Bitso launched MXNB**, a Mexican peso stablecoin, through its subsidiary Juno — issued on XRPL and integrated into Ripple's payments infrastructure. A local-currency stablecoin removes an FX conversion, which is precisely the friction USDC monetises.
- **Ripple** is pushing the US–Mexico corridor hard with XRP Ledger.
- MoneyGram and Global Payments — both Arc validators — are incumbents in this same corridor.

THE NUANCE WORTH HAVING READY

Local-currency stablecoins like MXNB are **not purely a threat**. A USDC→MXNB leg still needs a credible dollar asset on one side, and Circle's position is strongest as the dollar in every pair. The strategic risk is being disintermediated on corridors that never touch a dollar at all — which is a real question to raise, and a sophisticated one.

The honest numbers on Tether — know them before someone tests you.

SHARE OF STABLECOIN TRANSACTION VOLUME

USDT's LATAM position is close to total

BOLIVIA	Near 100%
PERU	Near 100%
ECUADOR	Near 100%
BRAZIL	~90%
CHILE	~90%

USDT functions as a **cash equivalent** in these markets — used for groceries and restaurants, not just trading. In Bolivia, the auto market including Toyota, BYD and Yamaha now accepts USDT, with volume up 630% after the crypto ban lifted.

AND TETHER IS NOT STANDING STILL

An aggressive equity offensive across the region

- **$20M into Ualá** (July 2026) — the Argentine neobank with 11M+ customers across Argentina, Mexico and Colombia.
- **Led a $14M round for Belo** (April 2026), a payments wallet expanding stablecoin payments across LATAM.
- Controls **70% of Adecoagro**, an agricultural and energy producer operating across Argentina, Brazil and Uruguay.

Read the strategy: Tether is buying distribution and real-economy anchors rather than marketing to end users. It is a balance-sheet play, and Circle cannot match it dollar for dollar.

HOW TO HANDLE THE INEVITABLE QUESTION — "HOW WOULD YOU BEAT TETHER?"

“I wouldn't, not on their ground. USDT owns retail savings in LATAM through a decade of P2P liquidity, and no campaign changes that. What's genuinely open is the regulated layer — banks, PSPs, marketplaces and treasuries who now, post-February, need a counterparty that survives a BCB audit. That's a different buyer with a different decision process, and it's one where an NYSE-listed issuer with attested reserves has an advantage Tether can't buy.”

The rest of the field, and what each one actually threatens.

COMPETITOR	POSITION	WHAT IT THREATENS	CIRCLE'S COUNTER
Tether (USDT)	~90–100% of LATAM volume; buying regional distribution	Everything in retail and P2P; increasingly the enterprise layer too	Regulatory standing, audited reserves, institutional validator roster
Local-currency stablecoins **MXNB (Bitso/Juno), BRL-pegged issuers**	Growing — MXNB on XRPL, in Ripple Payments	Removes the dollar leg entirely on domestic and some cross-border flows	Be the dollar in every pair; partner rather than compete on local currency
Ripple / RLUSD	Pushing US–Mexico hard; XRPL integrations	The remittance corridor specifically	PIX/SPEI native on-ramps, CPN institution network, USDC liquidity depth
PayPal PYUSD	Consumer brand strength, US-centric	Consumer trust and merchant acceptance longer term	Institutional depth and existing LATAM partner bench
Banks' own tokens **and Drex, Brazil's CBDC programme**	Emerging; Drex has had a long, uneven pilot	Could make a domestic bank rail the default, bypassing stablecoins	Interoperate — Matera's ledger already puts USDC alongside BRL. Position as complement, never as substitute for sovereign money
Traditional rails **SWIFT correspondent banking, Western Union**	Still the majority of cross-border value	Nothing technologically — but inertia and relationships are formidable	Price and speed: under 1% and seconds, versus days

THE ONE TO TAKE MOST SERIOUSLY

Not Tether. **Local-currency stablecoins.** If a Brazilian company can pay a Mexican supplier BRL→MXNB without ever touching a dollar, Circle isn't in the transaction at all. That is the genuine

> long-term structural threat to a dollar-issuer's relevance in intra-LATAM trade, and raising it unprompted signals you're thinking three years out rather than repeating a pitch deck.

Brazil, 2 February 2026 — the most consequential thing that has happened to this market.

The Banco Central published **Resolutions 519, 520 and 521** in November 2025; they took force on **2 February 2026**. It is the most comprehensive crypto framework in Latin America, and it changes what stablecoins legally *are* in Brazil.

RESOLUTION 521 — THE ONE THAT MATTERS MOST

Foreign-currency stablecoin operations are now FX operations

- Transactions in stablecoins referenced to a foreign currency are **classified as câmbio** — foreign exchange — and fall under BCB supervision.
- They attract **IOF-Câmbio**, Brazil's FX transaction tax.
- From **4 May 2026**, reporting these operations to the BCB became mandatory.
- International transfers settled in crypto, stablecoin purchase and sale, and transfers to self-custody wallets now require **identification of the holder and proof of source and destination of funds**.

AND THE LICENSING GATE

PSAV authorisation is now required

From February, firms that intermediate, custody or trade crypto assets for third parties need **prior authorisation from the Banco Central** — the PSAV licence — to operate in Brazil.

This is the entire marketing opportunity in one sentence: every Brazilian institution touching stablecoins has just been forced to re-paper its counterparty relationships under a regime where identification, provenance and audit trail are mandatory. In that re-papering, "who issues the dollar we hold" becomes a question with a compliance answer rather than a liquidity answer.

THE STRATEGIC READ TO BRING INTO THE ROOM

“February didn't just regulate the market — it reclassified stablecoins as foreign exchange and put them under the central bank. That turns the choice of issuer into a compliance decision made by a risk committee rather than a liquidity decision made by a trading desk. That's a decision Circle should win, and it's a marketing problem before it's a sales problem.”

VERIFY BEFORE YOU ASSERT

I could not confirm from public sources whether **Circle itself holds or is pursuing a PSAV authorisation**, or how its Brazilian partners are licensed post-February. That is the single highest-value question you could ask in the interview, and asking it demonstrates you understand what actually gates the business here.

Argentina is opening — and the timing is unusually good.

WHAT HAS CHANGED UNDER MILEI

- **The BCRA is reversing its 2022 prohibition** on banks offering crypto services, with rules moving through 2026. Licensed banks including **Banco Galicia, BBVA Argentina and Santander Argentina** have begun offering custody, trading and payment services to retail customers.
- **CNV General Resolution 1125/2026** recognises virtual assets — explicitly including stablecoins — as counting toward the net worth threshold for qualified investor status.
- VASP registration with the CNV is required above roughly 35,000 UVA (about US$29,000) of monthly volume.
- **And the enforcement signal:** the CNV issued a cease-and-desist against ARGt (Twin Finance), a peso-pegged stablecoin offering up to 32% APR, treating it as an unregistered security under a Howey-style test — the first stablecoin-specific securities enforcement in Argentina.

WHY THIS IS THE HIGHEST-VELOCITY OPPORTUNITY IN THE REGION

Argentine banks are entering a market where 24% of the population already holds crypto

Those banks need an issuer that survives a regulator's review, and they are choosing counterparties **right now**. Circle's Grupo BIND partnership — announced during Jeremy Allaire's visit to Buenos Aires, giving institutional USDC access through BIND's BEN platform — is precisely the right shape of first move.

A marketing function landing in the next six months can help define the default before the category settles. That is rare, and it is the argument for prioritising Argentina above its GDP weight.

ONE NUANCE THAT SHOWS DEPTH

Stablecoins are **not legal tender** in Argentina — they are held and used by private agreement. Any messaging implying otherwise is both wrong and, after the ARGt action, regulatorily risky. Precision here is a feature.

SAY THIS

"Argentina is the one market where the regulatory door is opening rather than closing, and the banks walking through it are picking counterparties this year. Circle's BIND partnership is the right first move — the marketing job is to make sure the next ten Argentine institutions consider it the obvious one."

What exists, what it signals, and what's missing.

PARTNER	MARKET	WHAT IT IS	WHAT IT SIGNALS
Nubank	Brazil	Partnership to extend USDC access to Nubank customers; **200,000+ customers transacting** with USDC following launch	**The single most valuable logo in LATAM fintech. Distribution to a base of well over 100 million**
BTG Pactual	Brazil	Digital asset products, near-instant 24/7 USDC access	Institutional and private-banking credibility — the wealth side of the market
Matera	Brazil	USDC integrated into the Digital Twin core ledger, so banks can offer USDC alongside BRL and USD	**Quietly the most strategic. Puts USDC inside bank core systems rather than beside them — among the first in the region to do that**
Grupo BIND	Argentina	Institutional USDC via the BEN digital asset platform	The institutional beachhead as banks are permitted back in
Alfred Pay	Brazil, Mexico	CPN beneficiary institution; stablecoin-to-fiat off-ramps via **PIX and SPEI**	The payout rail that makes CPN real in the region
Circle Mint	Brazil, Mexico	Local-currency bank transfer via PIX and SPEI — minutes, no international wire	Removes the single biggest operational friction for regional treasurers

STATED DIRECTION

- Circle is **building a local team in Argentina** and hiring a senior director based in Buenos Aires.
- Operating in Brazil, with stated expansion into **Mexico and Colombia**.
- Actively seeking partnerships with banks, fintechs, exchanges and payment providers.

THE VISIBLE GAPS — GOOD MATERIAL FOR QUESTIONS

- **No Mercado Pago / Mercado Libre relationship** that I could find. That is the largest consumer fintech distribution surface in the region and the most conspicuous absence.
- **No obvious Bitso relationship** — the dominant LATAM exchange and remittance processor, now issuing its own MXNB.
- Mexico presence looks thinner than Brazil's despite the corridor being the larger payments prize.
- Colombia and Chile are stated targets with little visible in market yet.

The audience isn't who most candidates will assume.

Because Circle earns on balances held through institutions, **the buyer is an organisation, not a consumer.** A LATAM marketing plan built around retail awareness misreads the business — and that misread is probably the most common way candidates lose this interview.

SEGMENT 1 · LARGEST BALANCES

Banks and regulated financial institutions

Who decides: risk and compliance committee, treasurer, head of digital assets.
What they need: attestations, licensing clarity, audit trail, BCB/CNV comfort, a name their board recognises.
The asset that moves them: the Arc validator roster and the reserve attestations — not campaigns.

SEGMENT 2 · FASTEST CYCLE

Fintechs, PSPs and marketplaces

Who decides: CTO, head of payments, CFO.
What they need: working docs, sandbox access, clear pricing, PIX/SPEI proof, a reference customer who looks like them.
The asset: developer experience and case studies. This is the segment where content marketing genuinely converts.

SEGMENT 3 · HIGHEST VOLUME, LOWEST MARGIN

MTOs and remittance operators

Who decides: COO, head of corridors.
What they need: corridor economics, settlement speed, liquidity depth, payout coverage.
The asset: CPN partner network and hard corridor cost comparisons.

SEGMENT 4 · BUILDS THE FUTURE PIPELINE

Developers and startups

Who decides: the engineer, then the founder.
What they need: SDKs, quickstarts, gas abstraction, hackathons, grants.
The asset: developer marketing — the cheapest durable moat Circle can build in the region, and the one Tether has never seriously contested.

SEGMENT 5 · FORCE MULTIPLIER

Regulators, policy and press

Who decides: not a buyer — a gatekeeper.
What they need: a legible, cooperative issuer that helps them understand the category.

The asset: policy engagement, research, and being the source LATAM journalists call. In a compliance-led sale, this *is* demand generation.

SEGMENT 6 · DELIBERATELY DEPRIORITISED

Retail consumers

Reached through partners, never directly. Circle has no consumer app to acquire into, USDT owns the mindshare, and any direct-to-consumer spend competes with the partners you depend on. **Saying this clearly is a strength, not a gap.**

What a regional marketing function should actually run.

THE SPINE

Partner marketing, because partners are the distribution

Circle's balances arrive through Nubank, BTG, Matera, BIND, Alfred. The highest-leverage marketing work is **co-marketing with them** — joint case studies, co-branded launches, their developer channels, their sales enablement.

One well-executed Nubank case study reaches more qualified LATAM buyers than a year of paid media. And it costs a fraction.

THE DIFFERENTIATOR

Compliance content as a marketing product

In a market that just re-regulated, the most valuable thing you can publish is **a clear, accurate, Portuguese-language explanation of what BCB 519/520/521 means for a fintech's stablecoin operations** — and the Spanish equivalent for the CNV and BCRA changes.

Nobody markets compliance because it isn't glamorous. It is exactly what the buyer is searching for, it is uncontested, and it positions Circle as the adult in the category. This is the same insight that makes regulation the wedge.

THE MOAT

Developer marketing in Portuguese and Spanish

- Localised docs and quickstarts — most of the developer surface is English-first.
- Hackathons and grants at Brazilian and Argentine universities and fintech communities.
- Reference implementations for the two things every LATAM builder wants: **PIX-to-USDC** and **USDC-to-SPEI**.

EVENTS — WHERE THIS AUDIENCE ACTUALLY IS

- **Febraban Tech** (São Paulo) — the Brazilian banking industry's event. Where the risk committees are.
- **Money20/20** and regional fintech conferences.
- **Blockchain Rio**, **Labitconf** (Argentina) — the crypto-native audience.
- Small, curated roundtables for heads of treasury and compliance beat large sponsorships for this buyer, and cost far less.

Verify the current-year calendar before naming specific events in the room.

BRAND VS DEMAND — THE SPLIT I'D ARGUE FOR

BRAND	Category leadership on "regulated dollar infrastructure". Earned media, policy voice, research. Roughly a third of effort.

DEMAND	Partner co-marketing, content, developer programmes, field events, account-based work against a named list. Roughly half.
ENABLEMENT	Localised sales and partner materials, competitive briefs, objection handling. The rest — and the part that gets skipped and then blamed.

THE LOCAL-KNOWLEDGE POINT THAT FEW CANDIDATES WILL MAKE

Marketing to Brazilian financial institutions is **relationship and event-led, in Portuguese, with a long trust cycle**. Marketing to Argentine fintechs is faster, more informal, and more crypto-native. Treating LATAM as one audience with one calendar is the most common failure mode of regional marketing plans — and having run this before, you can say so with authority.

First 90 days — nothing launches before it's instrumented.

DAYS 1–30 · LEARN AND BASELINE

- Map the org: who owns partnerships, sales, policy and product marketing globally, and where the regional line actually sits.
- Understand how the function is measured today, and what global expects from LATAM.
- **Baseline the number that matters:** USDC balances originated through LATAM partners, by market and by partner.
- Audit every asset for Portuguese and Spanish coverage. Expect most technical and compliance material to be English-only.
- Talk to the partners — Nubank, BTG, Matera, BIND, Alfred — about what they actually need from Circle marketing. They are the distribution; ask them.
- Resolve the open questions on slide 09 of this deck, starting with Circle's PSAV position in Brazil.

DAYS 31–60 · SHIP THE CHEAPEST HIGH-LEVERAGE ASSETS

- **The regulatory explainer, in pt-BR.** What BCB 519/520/521 means operationally for a fintech running stablecoin flows. Then the es-AR equivalent for the CNV and BCRA changes.
- **The first proof-point case study** with a named Brazilian partner and real numbers — settlement time, cost, volume.
- **Localised developer quickstarts** for PIX-to-USDC and USDC-to-SPEI.
- Stand up partner co-marketing with one partner, properly, end to end — rather than five, badly.
- A competitive brief the sales team can actually use, including honest USDT positioning.

DAYS 61–90 · BUILD THE ENGINE

- Named-account programme against the top 30 LATAM institutions, aligned with sales and partnerships.
- First curated roundtable for heads of treasury and compliance in São Paulo.
- Argentina beachhead plan, given banks are entering the market now.
- A recurring regional reporting cadence, so the function is legible upward.
- Developer programme v1 — docs, one hackathon, a grants path.

WHAT DELIBERATELY DOES NOT HAPPEN

No consumer brand campaign. No attempt to serve six markets at once. No large event sponsorship before there is a case study to put on the stand. And no messaging that positions USDC against sovereign money — in a market with an active CBDC programme in Drex and a central bank that just claimed jurisdiction, that framing is a liability rather than a growth strategy.

How this function should be measured — and the argument to have early.

THE METRIC THAT LADDERS TO REVENUE

USDC balances originated and retained through LATAM partners

Everything else is a leading indicator of this. If marketing can't draw a line from its activity to regional balances, it will be treated as a cost centre in the first budget cycle — which is exactly what happens to regional marketing functions in reserve-income businesses.

Reconcile this with the JD before you say it. The posting names *pipeline growth and customer acquisition*, so lead in their language and introduce balances as the refinement: pipeline is what you manage weekly, balances are what the pipeline is ultimately for. Framing it as a correction to their stated metric would be a misread of a business-partner role.

THE STACK BENEATH IT

PIPELINE	Qualified institutional opportunities sourced by marketing, by market and segment
PARTNER	Partners live and transacting; balance contribution per partner; time from signature to first flow
DEVELOPER	Docs engagement, sandbox signups, apps reaching production, PIX/SPEI reference-implementation forks
CATEGORY	Share of voice against Tether in pt-BR and es media; inbound from regulators and press
ENABLEMENT	Localised asset coverage; sales-team usage of competitive and compliance material

THE ARGUMENT TO MAKE IN MONTH ONE

Institutional sales cycles in LATAM banking run six to eighteen months. A marketing function judged on quarterly pipeline will optimise for the wrong things — noisy events and volume leads — and starve the compliance content and partner work that actually converts. **Push for balance contribution measured on twelve-month cohorts, with pipeline as a leading indicator rather than the target.** That decision gets made early or it gets made against you.

SAY THIS

“The thing I'd want agreed in month one is the measurement window. If we're judged on quarterly MQLs I'll produce quarterly MQLs, and none of them will be a Brazilian bank — because that decision takes a year. Measure me on balances originated through partners over twelve-month cohorts and I'll build something that compounds.”

Questions to ask, ordered by signal.

01 **"Is this role measured on USDC balances originated in the region, or on pipeline for CPN? Those imply different functions."**
The single most revealing question. It tells you whether the mandate is defined or you'd be inventing it.

02 **"Does Circle hold a PSAV authorisation in Brazil, and how are the partners licensed post-February?"**
Shows you understand what actually gates the business after the BCB resolutions. Very few candidates will ask this.

03 **"The JD lists seven global teams to coordinate with. Which of those seams causes the most friction today?"**
Regional marketing roles die in the seams. Naming that you counted them shows you read the posting properly.

04 **"With Arc mainnet on 16 September, what's LATAM's role in that launch?"**
It lands a month after you'd start. Asking positions you as current and surfaces whether you'd inherit a launch.

05 **"USDT is around ninety percent of volume in Brazil. What's the internal view on where Circle realistically wins?"**
Ask with curiosity, not challenge. A crisp answer is a good sign; no answer tells you the strategy is unformed.

06 **"Is Mercado Pago a live conversation? It's the most conspicuous absence in the partner map."**
Demonstrates you audited the footprint rather than reading the press page.

07 **"How do you think about local-currency stablecoins — MXNB and the BRL-pegged issuers — as complement or competition?"**
The most strategically sophisticated question on this list.

08 **"What does the LATAM team look like today, and what would I be building?"**
Practical. Also tells you whether it's a first hire or a rebuild.

09 **"What are the Managing Director's top two or three commercial priorities for the next two quarters?"**
The single best question for a business-partner role. It tells you what you'd actually be translating, and signals you understood the reporting line from the posting.

10 **"What does success look like at six months?"**
Always. Listen for whether the answer is a metric or an activity.

ONE TO HANDLE WITH JUDGEMENT

The **Coinbase revenue-share agreement is up for renewal this month**. It is genuinely material — it determines roughly what share of reserve income Circle keeps. But it is also

> commercially sensitive and above this role's line. If you raise it, raise it as context rather than as an ask: *"I read the distribution agreement is up this year — does that change how much the company values regionally-originated balances?"* That's the version that makes you sound commercially literate rather than nosy.

What they'll push on, and the honest answers.

"YOU DON'T HAVE CRYPTO OR STABLECOIN MARKETING EXPERIENCE"

Probably the hardest one. The answer isn't to overclaim — it's that you've launched a regulated financial product into LATAM from zero, which is the same machine: partner-led distribution, compliance-gated adoption, market-by-market localisation, and a category most consumers didn't understand yet. **Crypto.com was a licensed financial product in six markets, not a meme.** The vertical differs; the mechanics don't.

"THIS IS B2B INSTITUTIONAL MARKETING. YOUR BACKGROUND LOOKS CONSUMER."

Fair, and worth conceding cleanly before pivoting. The bridge: partner-led growth *is* B2B — you sold Crypto.com into banks, PSPs and regulators to get the consumer product live at all. If you have any named institutional relationships or partner-marketing work, this is where they belong.

"HOW WOULD YOU WIN AGAINST TETHER?"

Covered on slide 15. Do not claim you'd take retail share. Reframe to the regulated layer, and name the segment where a marketing budget can actually move the number.

"WHAT WOULD YOU DO IN YOUR FIRST 90 DAYS?"

Part 07. Lead with **instrument and baseline**, then the pt-BR regulatory explainer as the first shipped asset — it's cheap, uncontested, and immediately useful to every partner. Naming a concrete first deliverable beats describing a process.

RISKS TO HAVE THOUGHT ABOUT

- **Rate sensitivity** — falling rates compress revenue on flat balances, which pressures every budget including yours.
- **Distribution economics** — the Coinbase renewal.
- **Regulatory reversal** — Brazil could tighten further; the IOF-Câmbio treatment already adds cost to every stablecoin FX transaction.
- **Drex** — Brazil's CBDC programme has been slow and uneven, but a successful sovereign rail would change the domestic case materially.
- **Channel conflict** — MoneyGram and Global Payments as Arc validators versus MTO partners.
- **Tether's balance sheet** — it can buy distribution Circle would have to earn.

Your fit against the stated bar — honestly.

WHAT LINES UP, AND LINES UP WELL

- **"Demonstrated ownership of regional or multi-country marketing initiatives across Latin America."** This is the core requirement and it is exactly what taking Crypto.com across LATAM was.
- **Regulated financial services in the region.** Listed under preferred. A licensed crypto product launched market by market is precisely this.
- **Crypto, blockchain and stablecoin familiarity.** Preferred, and you have it natively — in a field where half the applicants hold MBAs and most will be traditional marketers.
- **"Comfort operating in fast-paced, ambiguous environments with evolving regulatory and macroeconomic conditions."** Written for someone with a crypto background.
- **Languages.** English and Portuguese required, Spanish strongly preferred — you have all three.
- **Based in São Paulo**, which the role requires.
- **Cross-functional work inside a distributed global organisation** — the same matrixed pattern as a global product launched regionally.

WHERE YOU'LL BE PRESSED

12+ YEARS	A hard, stated bar. If you're under it, expect it to come up early — and the counter is scope and outcomes rather than tenure.
TITLE HISTORY	The JD wants someone who has operated *as a senior regional marketing lead*. If your titles read growth, community or business development rather than marketing, name that directly and reframe: regional GTM ownership is the substance the title describes.
B2B PIPELINE	"Partnering closely with Sales, BD and Revenue to support pipeline growth" is the language of enterprise demand generation. Your strongest numbers are consumer-scale. Have the institutional half of that story ready — the banks, PSPs and regulators you sold into to get the consumer product live.
BUDGET AND FORECASTING	Explicitly required in partnership with finance. Have a figure you've owned and a forecasting cadence you've run.
MBA FIELD	51% of applicants have one. Not a requirement here, but it shapes the room — your differentiation is operator credibility in the actual market, not credentials.

THE FRAMING THAT TURNS THE GAP INTO THE ARGUMENT

“Most of the people applying for this will have marketed a payments product. Very few will have launched a regulated financial product in Brazil and Argentina from nothing, dealt with the regulator, and built the partner distribution that made it work. The stablecoin category

> in LATAM is about to be decided by exactly that kind of work — and I've already done it once here.”

Eight lines to have ready — and the five things to verify first.

01 "Circle monetises balances, not transactions. Onchain volume grew a hundred and fifty-one percent last quarter and revenue grew seven — that gap is the whole strategic story."

02 "Tether won the savings account in LATAM. That fight is over. The treasury and the payout rail are not."

03 "February reclassified stablecoins as foreign exchange in Brazil. Choosing an issuer became a compliance decision instead of a liquidity one — and that's a decision Circle should win."

04 "In LATAM, stablecoins aren't a crypto product. They're a dollar-access product on crypto rails, and most users don't consider themselves crypto users. Market the problem, not the technology."

05 "A Mexican family can already receive money over WhatsApp on a USDC rail for under one percent. The rail isn't the question — whose dollar rides it is."

06 "BlackRock, Visa, Mastercard and DTCC running validators does more with a Brazilian risk committee than any campaign I could buy."

07 "The threat I'd watch isn't Tether — it's local-currency stablecoins. If BRL settles to MXNB directly, we're not in the transaction at all."

08 "I've built exactly this machine in this region — a regulated financial product from zero across LATAM, partner by partner. The vertical is new to me; the mechanics aren't."

VERIFY BEFORE THE INTERVIEW

THE MD	Who the LATAM Managing Director is, and their background. You are being hired to partner with this person — knowing their history is basic preparation.
PSAV STATUS	Whether Circle holds or is pursuing Brazilian authorisation post-February.
TEAM	Whether any LATAM marketing headcount exists today, or this is the first hire.
COINBASE RENEWAL	Whether it concluded this month, and on what terms if disclosed.
ARC LAUNCH	Confirm 16 September is holding, and whether any LATAM partner is in the launch cohort.

IF YOU SAY NOTHING ELSE WELL, SAY THIS

“Circle's LATAM problem isn't awareness — it's that the buyer who matters just changed. Until February, choosing a stablecoin was a liquidity decision and Tether won it. Now it's a

> compliance decision made by a risk committee, and that's a different sale, a different audience and a different marketing function. I'd build for the buyer that exists after February, not the one that existed before it.”
